ADVANTAGE ENERGY

A Progressive Montney
Producer for the
New Energy Market

Investor Presentation

August 2026

Cautionary Statements / Advisory

This presentation contains forward-looking information and specified financial measures such as non-GAAP financial measures, non-GAAP ratios, capital management measures and supplementary financial measures. Readers are advised to read this presentation in conjunction with the advisories contained at the end of this presentation (see "Advisories") and the endnotes contained on page 34 of this presentation (see "Endnotes").

Advantage Energy: A Unique Investment Opportunity

We Convert Energy to Shareholder Wealth by Delivering Exceptional Performance

Concentrated High-Quality Assets

- ▶ *Over 50 Years of Montney Inventory + Charlie Lake Liquids*

Exceptional Well Results

- ▶ *Peer-Leading Productivity And Capital Efficiencies*

Relentless Focus on Shareholder Returns

- ▶ *Maximizing AFF per Share⁽¹⁾ Growth; FCF⁽¹⁾ Used For Buybacks*

Prudent Financial and Risk Management

- ▶ *A Strong Balance Sheet In Any Price Environment*

Financial Foundations

Market Overview: Capital Structure

Market Capitalization: **\$1.8bn**

Net Debt⁽¹⁾: **\$0.6bn**

Enterprise Value: **\$2.4bn**

Equity: AAV (TSX Listed)

Shares Outstanding: **167.4 mm**

Total share buybacks since 2022: **\$390mm / 38.8mm shares**

TSX 52-week High/Low: **\$13.20 - \$9.19**

Net Debt

Credit Facility: **\$650mm capacity / \$241mm available**

Convertible Debentures: **\$143.7mm / 2029 maturity**

World-Class Resource Base: The Foundation of our Business

Notes
• Sections refers to net sections being the sections Advantage has an interest multiplied by the working interest owned.

Advantage is in the Heart of the Montney Fairway

Premium Land Base Supports High-Quality Development

Tier 1 Inventory Across the Dry Gas, Liquids-Rich, and Oil Windows

BC AB

Asset Portfolio Spanning the Development Life Cycle

Over 2,400 Future Drilling Locations Across Commodities

BC Montney
Inventory: 350 Wells
2026 Net Drills: 0

Charlie Lake
Inventory: 265 Wells
2026 Net Drills: 6*
*Includes 1 Non-Op Well

>20 Years of Montney Tier 1 Inventory

- ✓ Two miles from existing Tier 1 production
- ✓ High-quality reservoir

>10 Years of Charlie Lake Tier 1 Inventory

- ✓ Within 1 mile of existing producer
- ✓ >4 mmbbls/section OOIP mapped

Progress
Inventory: 392 Wells
2026 Net Drills: 2

Glacier
Inventory: 795 Wells
2026 Net Drills: 15

Wembley
Inventory: 221 Wells
2026 Net Drills: 3

Valhalla
Inventory: 398 Wells
2026 Net Drills: 0

Exceptional Operational Performance: Industry-Leading Productivity

Advantage Delivered the **Top 9** Alberta Montney Gas Wells in 2025 Despite Voluntary Production Curtailments

Superior Productivity in the Montney Gas Window*

Dominant Infrastructure Position

Strategic Assets Valued at Over \$1 billion*

75 mmcf/d Progress Gas Plant is Now On-stream

Further major infrastructure spending not required in 3-year plan

* Management estimated replacement value

Glacier – World Class Asset, Raising the Bar Again

Valhalla & Progress – Next Phase of Liquids-Rich Development

Wembley – Cash Flow Engine With Low Sustaining Capital

Charlie Lake – Highly Accretive, Top-Quartile Addition to the Portfolio

Northeast BC – Positioned for Future Development

Highlights

- ▶ Existing 100 mmcf/d Caribou gas plant and upstream gas gathering network (*currently suspended*)
- ▶ Horizontal drilling has delineated production deliverability and secured mineral land tenure
- ▶ Offset operators actively developing adjacent lands
- ▶ Well licensing underway to provide flexibility for timely development

Endnotes

1. Specified financial measure which is not a standardized measure under International Financial Reporting Standards (“IFRS”) and may not be comparable to similar specified financial measures used by other entities. Please see “Specified Financial Measures” for the composition of such specified financial measure, an explanation of how such specified financial measure provides useful information to a reader and the purposes for which Management of Advantage uses the specified financial measure, and where required, a reconciliation of the specified financial measure to the most directly comparable IFRS measure. Also see “Specified Financial Measures” in Advantage’s MD&A for the three months ended March 31, 2026, and the three months and year ended December 31, 2025, for information relating to these measures.
2. Forward-looking information. See “Corporate update” in Advantage’s MD&A for the three months and year ended December 31, 2025, for an explanation of significant differences in forward-looking information and historical results. Refer to “Advisories” in this presentation and Advantage’s press releases dated February 12, 2026 and December 9, 2025, including advisories in the press releases for material assumptions and risk factors. 2027 and 2028 information is for illustration and is management prepared only and has not been approved by the Board of Directors of Advantage and is subject to change and a variety of contingencies including commodity prices and prior years’ results.
3. Production and economic forecasts per internal management estimates. Type well capital inclusive of drilling, completions, equip and tie-in (DCET) of a generic multi-well pad. Economic forecasts and calculations based on strip pricing assumptions as at April 13, 2026: WTI US\$/bbl (2026–\$83, 2027–\$73, 2028–\$69), AECO \$CDN/GJ (2026–\$1.55, 2027–\$2.20, 2028–\$2.50), FX \$CDN/\$US (2026–1.37, 2027–1.36, 2028–1.35).
4. Generic well payout is calculated from onstream date which assumes onstream November 2026.
5. Flat pricing assumptions calculated using FX \$CDN/\$US of 1.37, inflation (2028+ @ 2%).
6. Progress Gas Plant included in Glacier Net Capital Expenditures as associated with the Greater Glacier Area.
7. Net operating income and free cash flow disclosed on an area-only basis excludes corporate cash items including market diversification, hedging gains and losses, general and administrative expense, and finance expense.
8. “Low-carbon” and “Clean power” refers to emissions intensity lower than traditional fossil fuel-based power generation sources, such as coal, oil or natural gas, on a relative basis.
9. See [Entropy Press Release](#) date December 20, 2023. Advantage owns 92% of Entropy’s outstanding common shares. Assuming the investors’ currently-held unsecured debentures are exchanged for common shares according to the terms of the investment agreements, Advantage would subsequently own 46% of Entropy’s common shares.

Advisories

Forward-Looking Information and Statements

The information in this presentation contains certain forward-looking information and forward-looking statements (collectively, "**forward-looking statements**") within the meaning of applicable securities laws relating to the Corporation's plans and other aspects of its anticipated future operations, management focus, strategies, financial, operating and production results and business opportunities. These statements relate to future events or our future intentions or performance. All statements other than statements of historical fact may be forward-looking statements. The statements have been prepared by Management to provide an outlook of the Corporation's activities and results and may not be appropriate for other purposes. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "plan", "continue", "estimate", "guidance", "demonstrate", "expect", "may", "can", "will", "project", "predict", "potential", "target", "objectives", "intend", "could", "might", "should", "believe", "would" and similar expressions and include statements relating to, among other things: Advantage's focus, strategy and development plans; Advantage's plans to convert energy to shareholder wealth and to deliver exceptional performance; Advantage's anticipated 2026 average annual production and revenues; Advantage's strategy of maximizing AFF per share growth without compromising its balance sheet; Advantage's expectations that it will allocate FCF to optimize the balance sheet, share buybacks; Advantage's expectations regarding the timing, amount and allocation of free cash flow, including the proportion of free cash flow projected to be returned to shareholders and the anticipated share buyback levels; Advantage's anticipated liquids, natural gas and total production per year from 2026 to 2027; the anticipated completion of the Progress Gas Plant and the anticipated benefits thereof; Advantage's anticipated turnaround at its Glacier Gas Plant including the anticipated timing and cost thereof and anticipated benefits in connection therewith; the expectation that no further major infrastructure spending is required in Advantage's three-year plan; Advantage's 2026 budget, including its anticipated AFF per share growth, average annual production, corporate decline rate, cash used in investing activities (and the expectation that it will be fully funded at bottom-decile pricing), net debt and debt to adjusted funds flow ratio, royalty rate, operating expense per boe, transportation expense per boe, G&A expense per boe and finance expense per boe; Advantage's expectations as to when it will be subject to cash income taxes; Advantage's three-year plan, including average annual production range (corporately and by location), net capital expenditures (corporately and by location), net operating income (corporately and by location), free cash flow (corporately and by location), reinvestment ratio, AFF per share growth, debt to AFF, annual drilling activities; expectations that Advantage's 2026 capital budget will be fully funded at low commodity prices; Advantage's approach to risk management, including its targeted hedging levels; Advantage's hedging program and the anticipated benefits to be derived therefrom; anticipated natural gas price exposures; the anticipated timing of when Entropy's Glacier Phase 2 CCS project will come onstream, its expected project and capture capital efficiency and the anticipated costs thereof; and expectations that CCS is positioned for growth. Advantage's actual decisions, activities, results, performance or achievement could differ materially from those expressed in, or implied by, such forward-looking statements and accordingly, no assurances can be given that any of the events anticipated by the forward-looking statements will transpire or occur or, if any of them do, what benefits that Advantage will derive from them.

With respect to the forward-looking statements contained in this presentation, Advantage has made a number of material assumptions regarding, but not limited to: conditions in general economic and financial markets; effects of regulation by governmental agencies; current and future commodity prices; anticipated AECO, NYMEX and WTI prices; the Corporation's current and future hedging program; future exchange rates; future production and composition including natural gas and liquids; royalty regimes and future royalty rates; future operating costs; future transportation costs and availability of product transportation capacity; future general and administrative costs; the estimated well costs including frac stages and lateral lengths per well; the number of new wells required to achieve the objectives of the three-year strategic plan; that the Corporation will have sufficient financial resources required to fund its capital and operating expenditures and requirements as needed; timing and amount of net capital expenditures; the impact of increasing competition; that the Corporation's conduct and results of operations will be consistent with its expectations; that the Corporation will have the ability to develop the Corporation's properties in the manner currently contemplated; current or, where applicable, proposed assumed industry conditions, laws and regulations will continue in effect or as anticipated; and the estimates of the Corporation's production and reserves volumes and the assumptions thereto (including commodity prices and development costs) are accurate in all material respects.

Advisories (continued)

This presentation contains forward-looking statements which are estimates of Advantage's three-year plan (2025 to 2027 as originally press released December 10, 2024), including average annual production range (corporately and by location), net capital expenditures (corporately and by location), net operating income (corporately and by location), free cash flow (corporately and by location), reinvestment ratio, AFF per share growth, debt to AFF, and annual drilling activities. The foregoing estimates are based on various assumptions and are provided for illustration only and are based on budgets and estimates that have not been finalized and are subject to change and a variety of contingencies including commodity prices and prior years' results. In addition, the foregoing estimates and assumptions underlying the 2027 and 2028 forward-looking statements are management prepared only and have not been approved by the Board of Directors of Advantage. These estimates are made as of the date of this presentation and except as required by applicable securities laws, Advantage undertakes no obligation to update such estimates. In addition to the assumptions listed above, Advantage has made the following assumptions with respect to 2026, 2027 and 2028 contained in this presentation, unless otherwise specified:

- *Production growth of approximately 7% in 2026 and a long-term average production growth rate of approximately 5% to 10%;*
- *Liquids production representing approximately 14% to 16% of total production for 2026 to 2028;*
- *Capital spending of approximately \$280 million to \$310 million for 2026 and \$285 million to \$335 million for 2027 and 2028;*
- *Commodity prices utilizing forward pricing assumptions as at April 13, 2026: WTI US\$/bbl (2026–\$83, 2027–\$73, 2028 –\$69), AECO \$CDN/GJ (2026–\$1.55, 2027–\$2.20, 2028–\$2.50), FX \$CDN/\$US (2026–1.37, 2027–1.36, 2028–1.35);*
- *Current hedges (see Advantage's website);*
- *No cash income taxes for 2026 and 2027 due to over \$1.6 billion in high-quality tax pools (see note 17 "Income taxes" in Advantage's Consolidated Financial Statements for the year ended December 31, 2025 for estimated tax pools available). Tax pools are increased for net capital expenditures and reduced for tax pools used to reduce taxable income in a specific year; and*
- *FCF is assumed to reduce net debt to the target range of \$400 million to \$500 million, with FCF thereafter allocated to repurchasing common shares.*

These statements involve substantial known and unknown risks and uncertainties, certain of which are beyond Advantage's control, including, but not limited to: changes in general economic, market and business conditions; industry conditions; impact of significant declines in market prices for oil and natural gas; actions by governmental or regulatory authorities including increasing taxes and changes in investment or other regulations; changes in tax laws, royalty regimes and incentive programs relating to the oil and gas industry; the effect of acquisitions; Advantage's success at acquisition, exploitation and development of reserves; failure to achieve production targets on the timelines anticipated, or at all; unexpected drilling results; the risk that Advantage's average annual production may be less than anticipated; the risk that the turnaround at Advantage's Glacier Gas Plant may take longer than anticipated and may be more costly or not achieve the benefits anticipated; the risk that the construction of Advantage's new Progress Gas Plant may occur later than anticipated and may be more costly than anticipated; the risk that Advantage's financial and operating results in 2026 to 2028 and beyond may not be consistent with its expectations; the risk that Advantage's 2026 capital budget may not be fully funded at low commodity prices; the risk that free cash flow may not be dedicated to debt reduction and share buybacks as planned; the risk that Advantage may not have excess processing capacity; the risk that Advantage's infrastructure spending may be greater than anticipated; the risk that Advantage's Charlie Lake assets may not meet its expectations; and the risk that Entropy's Glacier Phase 2 CCS project may not come onstream when anticipated, or at all, and may be more costly than anticipated. Many of these risks and uncertainties and additional risk factors are described in the Corporation's Annual Information Form dated March 5, 2026, which is available at www.sedarplus.ca and www.advantageog.com.

Advisories (continued)

The future acquisition by the Corporation of the Corporation's shares pursuant to a share buyback program, if any, and the level thereof is uncertain. Any decision to implement a share buyback program or acquire shares of the Corporation will be subject to the discretion of the board of directors of the Corporation and may depend on a variety of factors, including, without limitation, the Corporation's business performance, financial condition, financial requirements, growth plans, expected capital requirements and other conditions existing at such future time including, without limitation, contractual restrictions, satisfaction of the solvency tests imposed on the Corporation under applicable corporate law and receipt of regulatory approvals. There can be no assurance that the Corporation will buyback any shares of the Corporation in the future.

Management has included the summary of assumptions and risks related to forward-looking information in order to provide readers with a more complete perspective on Advantage's future operations and such information may not be appropriate for other purposes. Advantage's actual results, performance or achievement could differ materially from those expressed in, or implied by, these forward-looking statements and, accordingly, no assurance can be given that any of the events anticipated by the forward-looking statements will transpire or occur, or if any of them do so, what benefits that Advantage will derive therefrom. Readers are cautioned that the foregoing lists of factors are not exhaustive. The Corporation and Management believe that the statements have been prepared on a reasonable basis, reflecting management's best estimates and judgments. However, because this information is highly subjective and subject to numerous risks including the risks discussed above, it should not be relied on as necessarily indicative of future results.

Financial Outlook

This presentation contains information that may be considered a financial outlook under applicable securities laws about the Corporation's potential financial position, including, but not limited to: Advantage's expectations that it will allocate FCF to optimize the balance sheet, share buybacks including expectations regarding the prioritization of share buybacks and other returns to shareholders, which may be conditional upon the Corporation achieving or maintaining targeted net debt levels; expectations regarding the timing, amount and allocation of free cash flow, including the proportion of free cash flow projected to be returned to shareholders and the anticipated share buyback levels; Advantage's 2026 budget, including its anticipated AFF per share growth, cash used in investing activities (and the expectation that it will be fully funded at bottom decile pricing), net debt and debt to adjusted funds flow ratio, royalty rate, operating expense per boe, transportation expense per boe, G&A expense per boe and finance expense per boe; Advantage's three-year plan, including average annual production range (corporately and by location), net capital expenditures (corporately and by location), net operating income (corporately and by location), free cash flow (corporately and by location), reinvestment ratio, AFF per share growth, and debt to AFF; expectations that Advantage's 2026 capital budget will be fully funded at low commodity prices; Advantage's hedging program and the anticipated benefits to be derived therefrom; anticipated natural gas price exposures; Advantage's expectations that it will not be subject to cash income taxes until 2029; and the anticipated costs of Entropy's Glacier Phase 2 CCS project; all of which are subject to numerous assumptions, risk factors, limitations and qualifications, including those set forth in the above paragraphs. The actual results of operations of the Corporation and the resulting financial results will vary from the amounts set forth in this presentation and such variations may be material. This information has been provided for illustration only and with respect to future periods are based on budgets and forecasts that are speculative and are subject to a variety of contingencies. Accordingly, these estimates are not to be relied upon. Because this information is subjective and subject to numerous risks, it should not be relied on as indicative of future results. Except as required by applicable securities laws, the Corporation undertakes no obligation to update such financial outlook. The financial outlook contained in this presentation was made as of the date of this presentation and was provided for the purpose of providing further information about the Corporation's potential future business operations. Readers are cautioned that the financial outlook contained in this presentation is not conclusive and is subject to change.

Advisories (continued)

Oil and Gas Metrics

This presentation contains a number of oil and gas and finance metrics, including "F&D cost", "recycle ratio", "payout", "internal rate of return (IRR)", "IP30", "IP90", "IP180" and "IP365" which do not have standardized meanings or standard methods of calculation and therefore such measures may not be comparable to similar measures used by other companies and should not be used to make comparisons. Such metrics have been included herein to provide readers with additional measures to evaluate the Corporation's performance; however, such measures are not reliable indicators of the future performance of the Corporation and future performance may not compare to the performance in previous periods and therefore such metrics should not be unduly relied upon. Management uses these oil and gas and finance metrics for its own performance measurements and to provide securityholders with measures to compare Advantage's operations over time. Readers are cautioned that the information provided by these metrics, or that can be derived from the metrics presented in this presentation, should not be relied upon for investment or other purposes.

Specified Financial Measures

Throughout this presentation and in other documents disclosed by the Corporation, Advantage discloses certain measures to analyze financial performance, financial position, and cash flow. These non-GAAP and other financial measures do not have any standardized meaning prescribed under IFRS and therefore may not be comparable to similar measures presented by other entities. The specified financial measures should not be considered to be more meaningful than GAAP measures which are determined in accordance with IFRS, such as net income and comprehensive income, cash provided by operating activities, and cash used in investing activities, as indicators of Advantage's performance. Refer to "Specified Financial Measures" in the Corporation's Management's Discussion & Analysis for the three months ended March 31, 2026, and for the three months and year ended December 31, 2025, which is available at www.sedarplus.ca and www.advantageog.com, for additional information about certain financial measures, including reconciliations to the nearest GAAP measures, as applicable.

Non-GAAP Financial Measures

Adjusted Funds Flow

The Corporation considers adjusted funds flow to be a useful measure of Advantage's ability to generate cash from the production of natural gas and liquids, which may be used to settle outstanding debt and obligations, support future capital expenditure plans, or return capital to shareholders. Changes in non-cash working capital are excluded from adjusted funds flow as they may vary significantly between periods and are not considered to be indicative of the Corporation's operating performance as they are a function of the timeliness of collecting receivables and paying payables. Expenditures on decommissioning liabilities are excluded from the calculation as the amount and timing of these expenditures are unrelated to current production and are partially discretionary due to the nature of our low liability.

Advisories (continued)

Net Capital Expenditures

Net capital expenditures include total capital expenditures related to property, plant and equipment, exploration and evaluation assets and intangible assets. Management considers this measure reflective of actual capital activity for the period as it excludes changes in working capital related to other periods and excludes cash receipts on government grants and incentives.

Free Cash Flow

Advantage computes free cash flow as adjusted funds flow less net capital expenditures excluding the impact of asset acquisitions and dispositions. Advantage uses free cash flow as an indicator of the efficiency and liquidity of the Corporation's business by measuring its cash available after net capital expenditures, excluding acquisitions and dispositions, to settle outstanding debt and obligations and potentially return capital to shareholders by paying dividends or buying back common shares.

Operating Income

Operating income for Advantage's natural gas and liquids operations is comprised of natural gas and liquids sales, realized gains (losses) on derivatives, net sales of purchased natural gas, net of expenses resulting from field operations, including royalty expense, operating expense and transportation expense. Operating income provides Management and users with a measure to compare the profitability of field operations between companies, development areas and specific wells.

Non-GAAP Ratios

Operating Netback

Operating netback is derived by dividing operating income by Corporate production during a period of time. Similar to operating income, operating netback provides Management and users with a measure to compare the profitability of field operations between companies, development areas and specific wells but on a unit of production measurement basis.

Adjusted Funds Flow per Share

Adjusted funds flow per share is derived by dividing adjusted funds flow by the basic weighted average shares outstanding of the Corporation. Management believes that adjusted funds flow per share provides investors an indicator of funds generated from the business that could be allocated to each shareholder's equity position.

Advisories (continued)

Reinvestment Ratio

Reinvestment ratio is calculated by dividing net capital expenditures by adjusted funds flow. Advantage uses reinvestment ratio as an indicator of the efficiency and liquidity of Advantage's business by measuring its cash available after net capital expenditures to settle outstanding debt and obligations and potentially return capital to shareholders by paying dividends or buying back common shares.

Debt to Adjusted Funds Flow Ratio

Debt to adjusted funds flow is derived by dividing net debt, which is a capital management measure, by adjusted funds flow for the previous four quarters, which is a non-GAAP financial measure. Debt to adjusted funds flow is a coverage ratio that provides Management and users the ability to determine how long it would take the Corporation to repay its debt if it devoted all of its adjusted funds flow to debt repayment.

Payout

Payout is the length of time, typically expressed in years or months, required for a well or project to recover all associated costs from its operating income. Payout is considered by Management to be a useful performance measure as a common metric used to evaluate capital allocation decisions.

Recycle Ratio

Recycle ratio is calculated by dividing Advantage's operating netback by the calculated F&D cost or FD&A cost of the applicable year and expressed as a ratio. Management uses recycle ratio to relate the cost of adding reserves to the expected operating netback to be generated.

Finding and Development Costs ("F&D")

F&D cost is calculated based on adding net capital expenditures excluding acquisitions and dispositions, and the net change in future development capital ("FDC"), divided by the change in reserves within the applicable reserves category for the year. Additionally, the Corporation discloses three-year average F&D cost, which is calculated based on adding net capital expenditures excluding acquisitions and dispositions from 2025, 2024 and 2023, and the net change in FDC from 2025, 2024 and 2023, divided by reserve additions from 2025, 2024 and 2023. Management uses F&D costs as a measure of capital efficiency for organic reserves development.

Advisories (continued)

Capital Management Measures

Net Debt

Net debt is a capital management measure that provides Management and users with a measure to assess the Corporation's liquidity. Net debt is not a standardized measure and therefore may not be comparable with the calculation of similar measures by other entities. Net debt includes bank indebtedness, working capital, and the face value of convertible debentures outstanding.

Supplementary Financial Measures

Internal Rate of Return ("IRR")

Internal rate of return means the rate of return of a well or the discount rate required to arrive at a net present value ("NPV") equal to zero.

Capital Efficiency

Capital efficiency is calculated by dividing net capital expenditures by the average production additions to replace the corporate decline rate and deliver production growth, expressed in \$/boe/d. Net capital expenditures used in the calculation excludes net capital expenditures incurred by Entropy as these expenditures are not related to Advantage production additions. Capital efficiency is considered by Management to be a useful performance measure as a common metric used to evaluate the efficiency with which capital activity is allocated to achieve production additions.

Advisories (continued)

Net Present Value ("NPV") per Share

Net present value per share is comprised of net present value of either Proved Developed Producing ("PDP"), Proved or Proved plus Probable reserves (before tax, 10% discount rate) from the McDaniel 2025 Reserves Report, divided by the outstanding shares of the Corporation as at December 31, 2025.

Dollars per BOE figures

Throughout this presentation, the Corporation presents certain financial figures, in accordance with IFRS, stated in dollars per boe. These figures are determined by dividing the applicable financial figure as prescribed under IFRS by the Corporation's total production for the respective period. Following is a list of figures which have been presented in this presentation in \$ per boe: Operating expense per boe; Transportation expense per boe; G&A expense per boe; and Finance expense per boe.

Oil and Gas Information

Barrels of oil equivalent ("boe") and thousand cubic feet of natural gas equivalent ("mcf") may be misleading, particularly if used in isolation. Boe and mcf conversion ratios have been calculated using a conversion rate of six thousand cubic feet of natural gas equivalent to one barrel of oil. A boe and mcf conversion ratio of 6 mcf: 1 bbl is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. Given that the value ratio based on the current price of crude oil as compared to natural gas is significantly different from the energy equivalency of 6:1, utilizing a conversion on a 6:1 basis may be misleading as an indication of value.

Production estimates contained herein are expressed as anticipated average production over the calendar year. In determining anticipated production for the three-year plan, Advantage considered historical drilling, completion and production results for prior years and took into account the estimated impact on production of the Corporation's three-year expected drilling and completion activities.

References in this presentation to production test rates, initial production rates ("IP"), IP30, IP90, IP180, IP365 and other short-term production rates are useful in confirming the presence of hydrocarbons; however, such rates are not determinative of the rates at which such wells will commence production and decline thereafter and are not indicative of long-term performance or of ultimate recovery. Additionally, such rates may also include recovered "load oil" fluids used in well completion stimulation. While encouraging, readers are cautioned not to place reliance on such rates in calculating the aggregate production of Advantage. Advantage cautions that the test results should be considered to be preliminary.

Advisories (continued)

This presentation discloses drilling inventory in three categories: (i) proved locations; (ii) probable locations; and (iii) unbooked locations. Booked locations include both proved locations and probable locations that are derived from the McDaniel & Associates Consultants Ltd. reserves evaluations effective December 31, 2025 and account for drilling locations that have associated proved and/or probable reserves, as applicable. Unbooked locations are internal estimates based on our prospective acreage and an assumption as to the number of wells that can be drilled per section based on industry practice and internal review. Unbooked locations do not have attributed reserves or resources. Of the 2,421 total drilling locations identified, 331 are proved locations, 93 are probable locations and 1,997 are unbooked locations. Of the 795 Glacier drilling locations identified, 142 are proved locations, 50 are probable locations and 603 are unbooked locations. Of the 392 Progress drilling locations identified, 17 are proved locations, 5 are probable locations and 370 are unbooked locations. Of the 398 Valhalla drilling locations identified, 56 are proved locations, 0 are probable locations and 342 are unbooked locations. Of the 221 Wembley drilling locations identified, 22 are proved locations, 13 are probable locations and 186 are unbooked locations. Of the 265 Charlie Lake drilling locations identified, 94 are proved locations, 25 are probable locations and 146 are unbooked locations. Of the 350 BC Montney drilling locations identified, 0 are proved locations, 0 are probable locations and 350 are unbooked locations. Unbooked locations have been identified by Management as an estimation of our multi-year drilling activities based on evaluation of applicable geologic, seismic, engineering, production and reserves information. There is no certainty that the Corporation will drill all unbooked drilling locations and if drilled there is no certainty that such locations will result in additional oil and gas reserves, resources or production. The drilling locations on which we actually drill wells will ultimately depend upon the availability of capital, regulatory approvals, seasonal restrictions, oil and natural gas prices, costs, actual drilling results, additional reservoir information that is obtained and other factors. While certain of the unbooked drilling locations have been de-risked by drilling existing wells in relative close proximity to such unbooked drilling locations, other unbooked drilling locations are farther away from existing wells where management has less information about the characteristics of the reservoir and therefore there is more uncertainty whether wells will be drilled in such locations and if drilled there is more uncertainty that such wells will result in additional oil and gas reserves, resources or production.

Advantage has presented certain type curves and well economics for its Glacier, Valhalla, Wembley and Charlie Lake areas. The type curves presented with respect to Glacier, Valhalla and Wembley are Management estimates based on Advantage's historical production, and with respect to Charlie Lake, based on both Advantage's and regional historical production. Such type curves and well economics are useful in understanding Management's assumptions of well performance in making investment decisions in relation to development drilling in such areas and for determining the success of the performance of development wells; however, such type curves and well economics are not necessarily determinative of the production rates and performance of existing and future wells and such type curves do not reflect the type curves used by our independent qualified reserves evaluator in estimating our reserves volumes. The type curves differ as a result of varying horizontal well length, stage count and stage spacing. The type curves represent the average type curves expected. In this presentation, estimated ultimate recovery represents the estimated ultimate recovery associated with the type curves presented; however, there is no certainty that Advantage will ultimately recover such volumes from the wells it drills.

Advisories (continued)

Market, Independent Third Party and Industry Data

Certain market, independent third party and industry data contained in this presentation is based upon information from government or other independent industry publications and reports or based on estimates derived from such publications and reports. Government and industry publications and reports generally indicate that they have obtained their information from sources believed to be reliable, but none of Advantage or its affiliates have conducted their own independent verification of such information. This presentation also includes certain data derived from independent third parties, including, but not limited to, the total capital efficiency, PDP FD&A costs, PDP recycle ratio and IP180 of certain of Advantage's peers. While Advantage believes this data to be reliable, market and industry data is subject to variations and cannot be verified with complete certainty due to limits on the availability and reliability of raw data, the voluntary nature of the data gathering process and other limitations and uncertainties inherent in any statistical survey. None of Advantage or its affiliates have independently verified any of the data from independent third-party sources referred to in this presentation or ascertained the underlying assumptions relied upon by such sources.

Information Regarding Public Issuer Counterparties

Certain information contained in this presentation relating to the Corporation's public issuer counterparties and the nature of their respective businesses is taken from and based solely upon information published by such issuers. None of Advantage or its affiliates have independently verified the accuracy or completeness of any such information.

Abbreviations

The following abbreviations used in this presentation have the meanings set forth below.

<i>AECO</i>	<i>A notational market point on TransCanada Pipeline Limited's NGTL system where the purchase and sale of natural gas is transacted</i>
<i>b or bn</i>	<i>billion</i>
<i>bbl</i>	<i>barrel</i>
<i>bbl/d or bbls/d</i>	<i>barrel(s) per day</i>
<i>bbls/mmcf</i>	<i>barrels per million cubic feet</i>
<i>Bcf</i>	<i>billion cubic feet</i>
<i>boe</i>	<i>barrels of oil equivalent, on the basis of one barrel of oil or natural gas liquids for six thousand cubic feet of natural gas</i>
<i>boe/d</i>	<i>barrels of oil equivalent per day</i>
<i>C5+</i>	<i>pentanes plus</i>
<i>CAGR</i>	<i>compound annual growth rate</i>
<i>CCS or CCUS</i>	<i>carbon capture and storage or carbon capture, utilization and storage</i>
<i>CO₂</i>	<i>carbon dioxide</i>
<i>DCET or half-cycle</i>	<i>drill, complete, equip and tie-in cost associated with a well</i>
<i>E</i>	<i>estimate, when used after a year indicates an estimated value for that period</i>
<i>FID</i>	<i>final investment decision</i>
<i>GJ</i>	<i>gigajoule</i>
<i>IP30, IP90, IP180, IP365</i>	<i>average initial peak production rate over 30, 90, 180 or 365 consecutive days after a well is brought on production and cleaned up</i>
<i>LTIF</i>	<i>lost-time injury frequency</i>
<i>m or mm</i>	<i>million</i>
<i>mcf</i>	<i>thousand cubic feet</i>
<i>mcfe</i>	<i>thousand cubic feet equivalent on the basis of six thousand cubic feet of natural gas for one barrel of oil or natural gas liquids</i>
<i>mcf/d</i>	<i>thousand cubic feet per day</i>
<i>Mmbtu/d</i>	<i>million British thermal units per day</i>
<i>mmcf</i>	<i>million cubic feet</i>
<i>mmcf/d</i>	<i>million cubic feet per day</i>
<i>Natural gas</i>	<i>conventional natural gas and shale gas as defined in National Instrument 51-101 – Standards of Disclosure for Oil and Gas Activities ("NI 51-101")</i>
<i>NGL</i>	<i>natural gas liquids as defined in NI 51-101</i>
<i>Oil</i>	<i>light and medium crude oil as defined in NI 51-101</i>
<i>OOIP</i>	<i>original oil-in-place</i>
<i>tCO₂e</i>	<i>tonnes carbon dioxide equivalent</i>
<i>TRIF</i>	<i>total recordable injury frequency</i>
<i>WCSB</i>	<i>Western Canadian Sedimentary Basin</i>
<i>WTI</i>	<i>West Texas Intermediate</i>
